

Covid-19 Vulnerability Policy

Although Nightlife outreach has done its utmost to make the centre Covid-19 secure we strongly advise that anyone who falls in the vulnerable high and medium risk category's do not attend workshops classes or events at the centre during the current pandemic

Who's at higher risk from coronavirus

Coronavirus (COVID-19) can make anyone seriously ill. But for some people, the risk is higher.

There are 2 levels of higher risk:

- high risk (clinically extremely vulnerable)
- moderate risk (clinically vulnerable)

People at high risk (clinically extremely vulnerable)

People at high risk from coronavirus include people who:

- have had an organ transplant
- are having chemotherapy or antibody treatment for cancer, including immunotherapy
- are having an intense course of radiotherapy (radical radiotherapy) for lung cancer
- are having targeted cancer treatments that can affect the immune system (such as protein kinase inhibitors or PARP inhibitors)
- have blood or bone marrow cancer (such as leukaemia, lymphoma or myeloma)
- have had a bone marrow or stem cell transplant in the past 6 months, or are still taking immunosuppressant medicine
- have been told by a doctor they have a severe lung condition (such as cystic fibrosis, severe asthma or severe COPD)
- have a condition that means they have a very high risk of getting infections (such as SCID or sickle cell)
- are taking medicine that makes them much more likely to get infections (such as high doses of steroids or immunosuppressant medicine)
- have a serious heart condition and are pregnant

Nightlife Outreach

People at moderate risk (clinically vulnerable)

People at moderate risk from coronavirus include people who:

- are 70 or older
- have a lung condition that's not severe (such as asthma, COPD, emphysema or bronchitis)
- have heart disease (such as heart failure)
- have diabetes
- have chronic kidney disease
- have liver disease (such as hepatitis)
- have a condition affecting the brain or nerves (such as Parkinson's disease, motor neurone disease, multiple sclerosis or cerebral palsy)
- have a condition that means they have a high risk of getting infections
- are taking medicine that can affect the immune system (such as low doses of steroids)
- are very obese (a BMI of 40 or above)
- are pregnant

What to do if you're at moderate risk

If you're at moderate risk from coronavirus, you can go out to work (if you cannot work from home) and for things like getting food or exercising. But you should try to stay at home as much as possible.

It's very important you follow the general advice on [social distancing](#). This includes trying to stay at least 2 metres (3 steps) away from anyone you do not live with or anyone not in your support bubble.
